I use Google Chrome browser for browsing Internet. It worked fine till yesterday. Today morning when I turned ON my computer and started browsing Internet, it worked fine for 10-15 minutes and then started giving the network failed error message. I am sure that my Internet is working fine as other devices do not have any issues.

I have researched it online and tried:

1. Deleting the history, cookies.
2. resetting the browsers.
3. disconnecting and connecting the Internet to the computer.

Still no luck after trying all the above steps. I am also afraid that I will loose my bookmarks saved in the browser. Can anyone help me in fixing the issue without loosing my bookmarks?
